

Clim'Ability Care :

For a new corporate culture in the Upper Rhine region that prevents climate risks

www.clim-ability.eu

The **Clim'Ability Care** project continues the intentions of the previous projects Clim'Ability (2016-2019) and Clim'Ability Design (2019-2023): to support SMEs and SMIs in dealing with the consequences of climate change. This support was initially focused on adaptation, which appeared to be the poor relation of climate policies that had been built on the principle of warning and mitigation.

The project aims to expand territories, qualified as pilot territories, to create a new entrepreneurial culture based on a broader approach to climate risks. The project is organized around a roadmap that identifies critical infrastructure that can trigger cascading phenomena and double climate impacts.

Another aim is to update open source tools to support companies in their approach to climate resilience and testing specific solutions that can be adopted on a broader scale are among the responses to these challenges.

Clim'Ability Care wants to meet this challenge by exploiting the synergies between local experimentation, communication and awareness-raising

Team Clim'Ability Care

initiatives and internship proposals. The territories' engagement in the search for levers of change involves experimentation with the aim of disseminating them throughout Europe and beyond.

This mobilization is for the benefit of a new culture of precautionary entrepreneurship for the major ecosystems and the human and non-human populations of the Upper Rhine. To contribute to this, we mobilize all resources, including the methods we have developed, in particular through collaboration with SMEs/SMEs, while respecting the specific maturity levels of each one.

Finally, the project has the task of studying the conditions for the sustainability of these climate services for companies in the Upper Rhine.

THE CLIM'ABILITY CARE TOOLKIT

Updating and expanding the toolkit :

The Clim'Ability Toolkit has a range of tools that help to create and promote a culture of warning

The Clim'Ability toolkit provides a variety of innovative tools to respond to climatic constraints. Visit our website to discover more.

Clim'Ability Diag

Assessment of sensitivity to climatic hazards on the basis of climatic climate forecasts and the company's experience in the relevant area concerned.

Upper Rhine Climate Inspector

Companies can determine the specific consequences of climate change based on their location on an interactive map of the Upper Rhine, with regard to 6 climate risks, 3 time horizons and the two scenarios "Climate protection scenario" (RCP4.5) and "Continue as before scenario" (RCP8.5)

Landing Game / MOBILAB

Relying on local collective intelligence, the Landing Game aims to facilitate exchanges between different players who share a common base in the Upper Rhine.

THE PILOT SITES

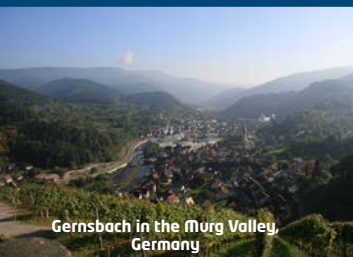

The Clim'Ability Care project is committed to a number of extended territories, known as pilot territories, to launch a new corporate culture based on a broader approach to climate risks.

The list includes :

- The **Murg valley** because of the risk of flooding,
- The **Val d'Argent**, with its residential economy, ecological assets and tourist attractions,
- The **Strasbourg port** area, due to its comparative logistical weight.
